Fire Joker

The reels can set fire at any moment in Fire Joker, a 3-reel video slot game with 5 fixed paylines. A combination of three matching symbols along any payline constitutes as a win.

The devilish Fire Joker is a wild symbol that can appear in any position on all three reels. It substitutes for all normal symbols to help comprise winning combinations.

Trigger the Flaming Re-spin feature when stacked symbols show on any two reels with no winning paylines. One free re-spin is then awarded on the third reel! The stacked symbols remain in place during the re-spin. If there would be the possibility of two different reels to re-spin, then the reels that will give you the biggest potential reward will remain in place!

Spin the fiery Wheel of Multipliers when all reel positions are filled with the same symbol, where your total win can bubble up by a random value up to a maximum of x10!

Casino Standard Settings and Rules

Games

Maximum wins are inclusive the origin bet on table games. Values in bold can be changed by the operator. Underlined and bold values are default settings when there is a limited set of options for a setting. Jackpot Id's listed next to the game relate to the EUR network jackpots.

All currency values relate to a currency multiplier of 1 which is accurate for EUR, USD, and GBP. For other currencies another multiplier might be used. For example: SEK has currency multiplier 10. All values related to currency should thus be multiplied by 10 for SEK. I.e. 10€ = \$10 = £10 = SEK100.

For table games the maximum wins are based on the default bets for the games. If the default bets are altered, the maximum wins will be altered as well. For example: The maximum win in Black Jack is 250 per hand based on a default max bet of 100. If the default max bet is set to 200 the maximum win will then be 500.

For denomination based games such as video pokers and slot machines, the maximum win is based on the maximum bet which is the coins x lines (hands) x max denomination. The max denomination is not always turned on by default, so the default maximum win might be lower than stated.

A currency value is marked with an asterisk (*) next to the caption in all tables.
